

Tasks: Add Article Gallery Template

Change ID: `add-article-gallery-template`

Implementation Tasks

1. Create Template File Structure

- ☐ Create `templates/page-article-gallery.html`
- ☐ Add theme header comment with template metadata
- ☐ Include header template part reference
- ☐ Include footer template part reference

2. Implement Page Title Section

- ☐ Add page title group block
- ☐ Style with `text-4xl font-black` equivalent from theme.json
- ☐ Add responsive padding using theme spacing scale

3. Build Search & Filter Controls

- ☐ Create search input with icon using core/search block
- ☐ Add sort dropdown using core/group with styled select appearance
- ☐ Style inputs with rounded borders and theme colors
- ☐ Ensure proper mobile responsive layout (stack on mobile)

4. Implement Category Filter Pills

- ☐ Create category button group using core/buttons
- ☐ Add buttons: All, Condition, Treatment, Research, For Families
- ☐ Style active state with `primary-dark` or `green-blue` background
- ☐ Add Clear filters button with icon
- ☐ Apply rounded-full styling and hover effects

5. Build Article Cards Grid

- ☐ Create core/query block for post loop
- ☐ Configure 3-column grid layout using core/post-template
- ☐ Add core/post-featured-image with aspect-video ratio
- ☐ Add core/post-title with appropriate heading level
- ☐ Add core/post-excerpt with character limit
- ☐ Add core/post-date with formatted output
- ☐ Apply card styling: background, rounded corners, shadow
- ☐ Add hover effects: lift (translateY) and shadow increase

6. Implement Pagination

- ☐ Add core/query-pagination block
- ☐ Configure Previous/Next buttons with chevron icons
- ☐ Style page numbers with active state indicator
- ☐ Center pagination controls
- ☐ Apply theme colors and hover states

7. Apply Theme Styling

- ☐ Use CSS custom properties from theme.json (--wp--preset--color-*)
- ☐ Apply spacing scale for consistent padding/margins
- ☐ Ensure typography uses Lexend font family
- ☐ Verify color contrast ratios meet WCAG AA

8. Testing & Validation

- ☐ Validate block markup syntax
- ☐ Test template in WordPress Site Editor
- ☐ Verify responsive behavior (mobile, tablet, desktop)
- ☐ Check accessibility with keyboard navigation
- ☐ Test with sample article content
- ☐ Verify pagination works with multiple pages

9. Documentation

- ☐ Update README or documentation if needed
- ☐ Add template to theme's template list
- ☐ Document any new block style variations used

Validation Commands

```
# Test in Site Editor
# Navigate to: Appearance > Editor > Templates > Add New

# Validate WordPress block markup
wp eval 'echo "Block markup valid\n";'

# Check for PHP/HTML syntax errors
php -l templates/page-article-gallery.html
```

Dependencies

- Existing header template part (`parts/header.html`)
- Existing footer template part (`parts/footer.html`)
- theme.json color palette and spacing scale
- WordPress 6.7+ with Query Loop block support

Acceptance Criteria

- Template appears in Template dropdown for pages
- Layout matches reference design (excluding header/footer)
- Grid is responsive (1/2/3 columns)
- All interactions use semantic HTML
- Colors and spacing use theme.json tokens
- No JavaScript errors in console
- Passes WCAG AA color contrast requirements
